

10AW2 (Ni-rich) BADA optical micrographs

Polished to a depth of $\sim 240 \mu\text{m}$
below the surface

Projectile travelled in the $-z$ direction

Micrograph taken at a distance from
the hole

Higher magnification image of shear bands

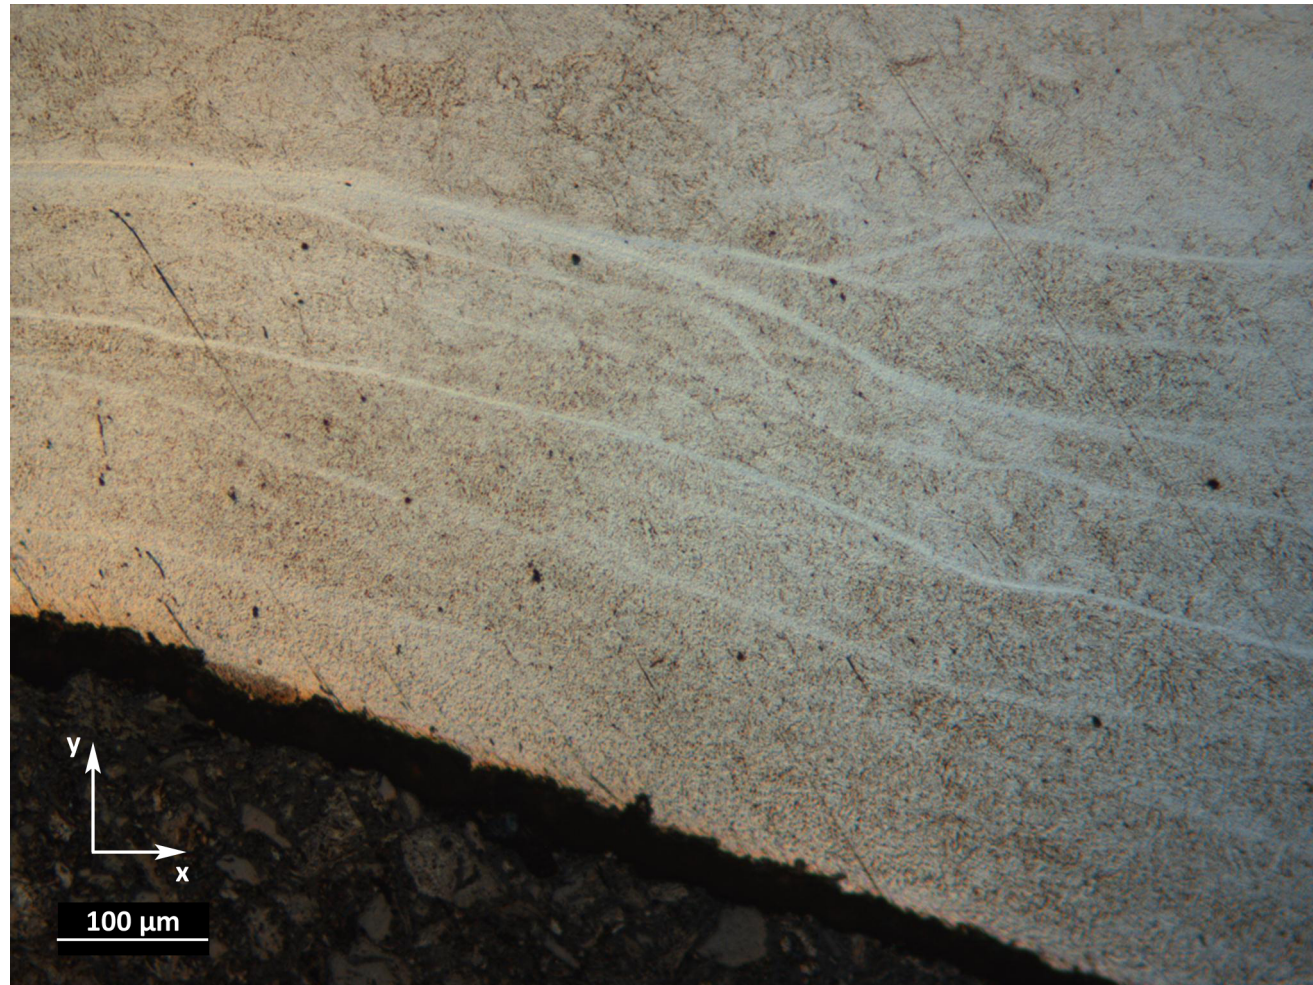

Material face on the LHS is where the sample was machined to cut it from the plate.

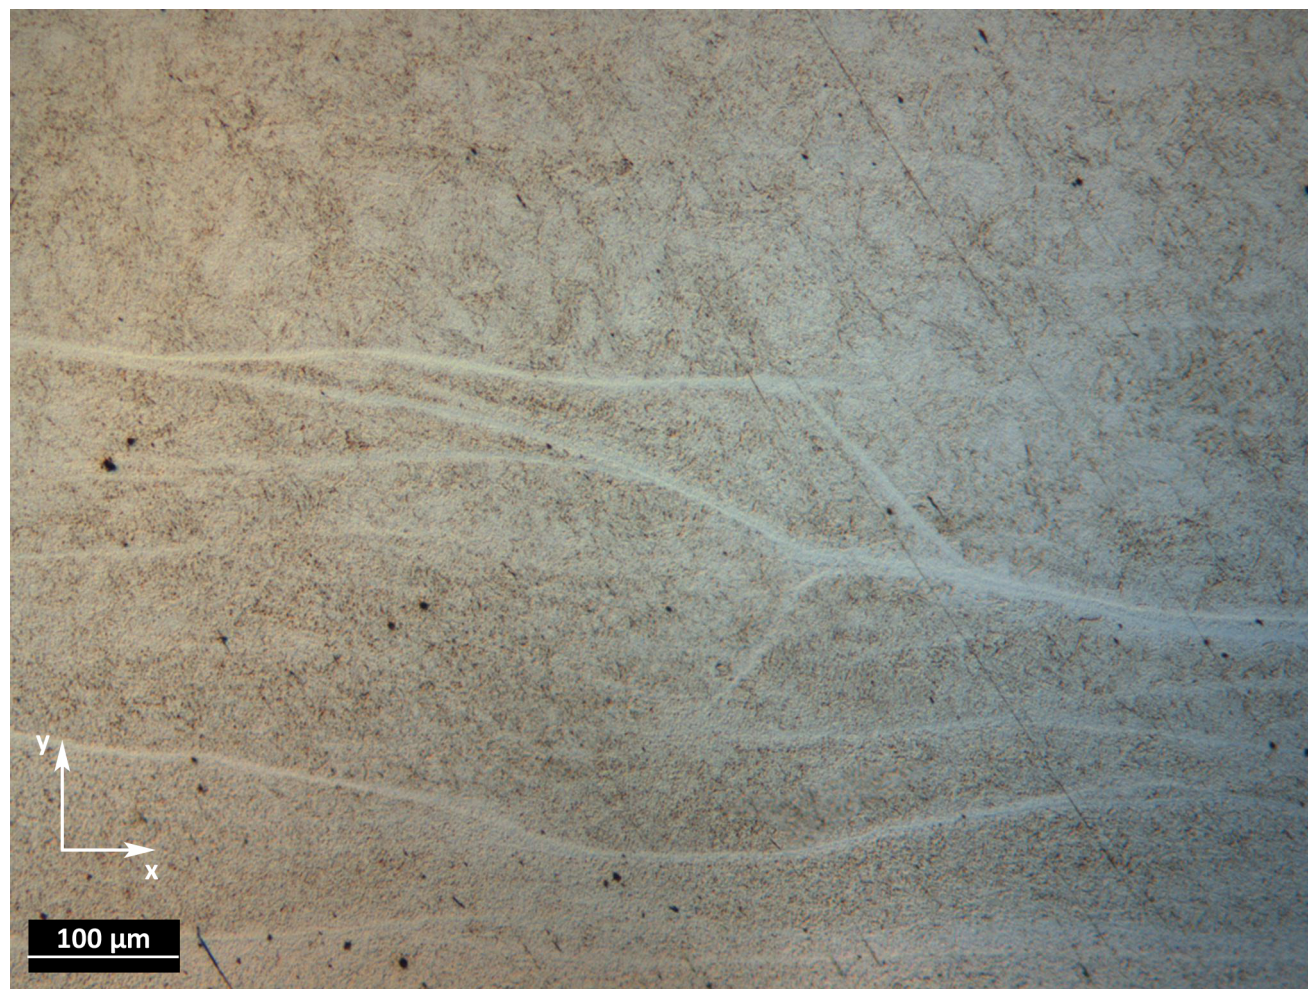

Close up of shear band

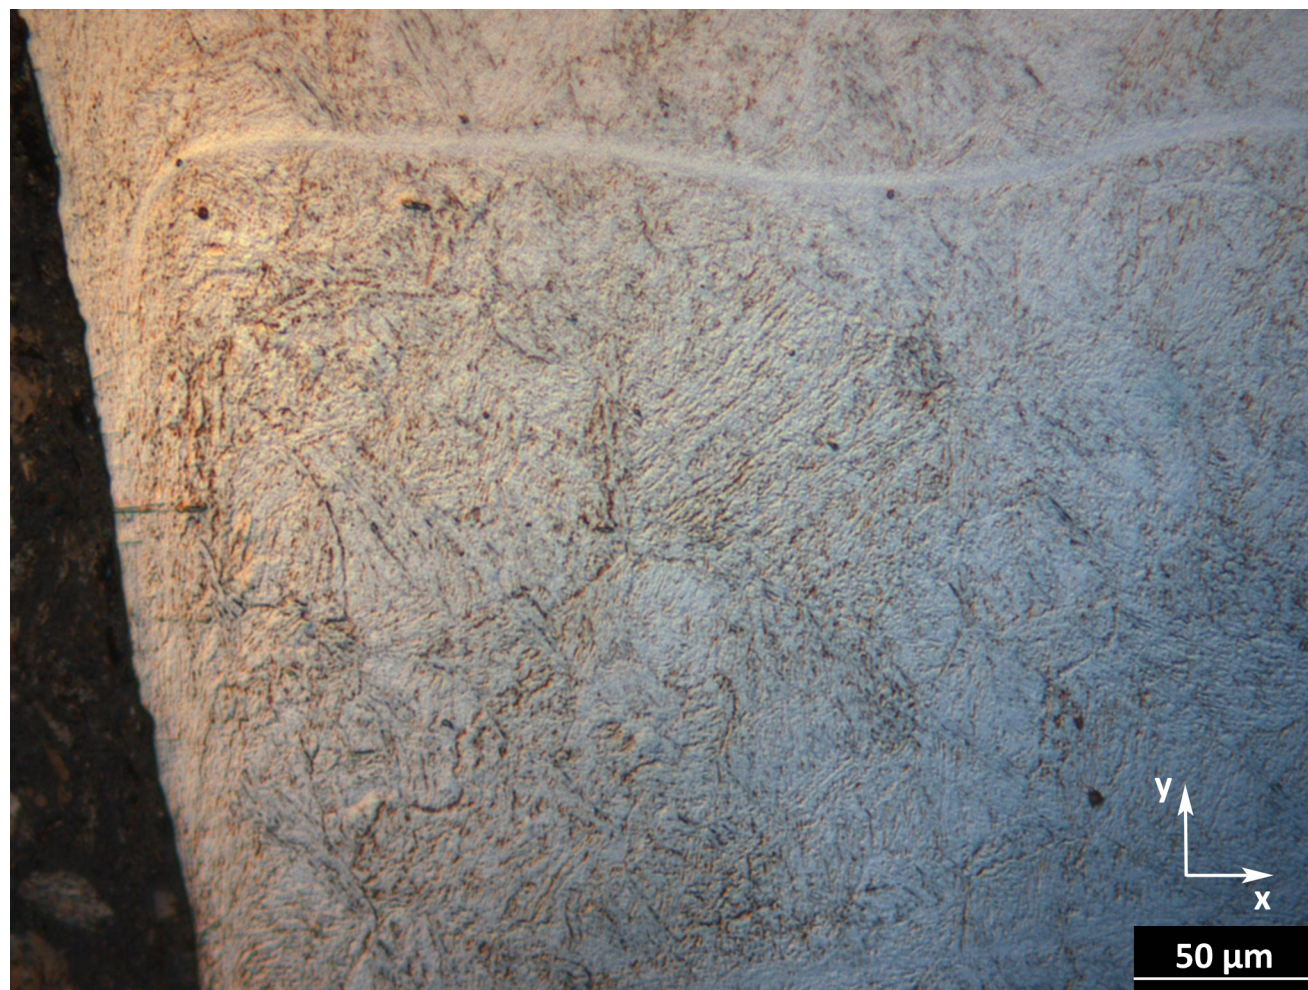

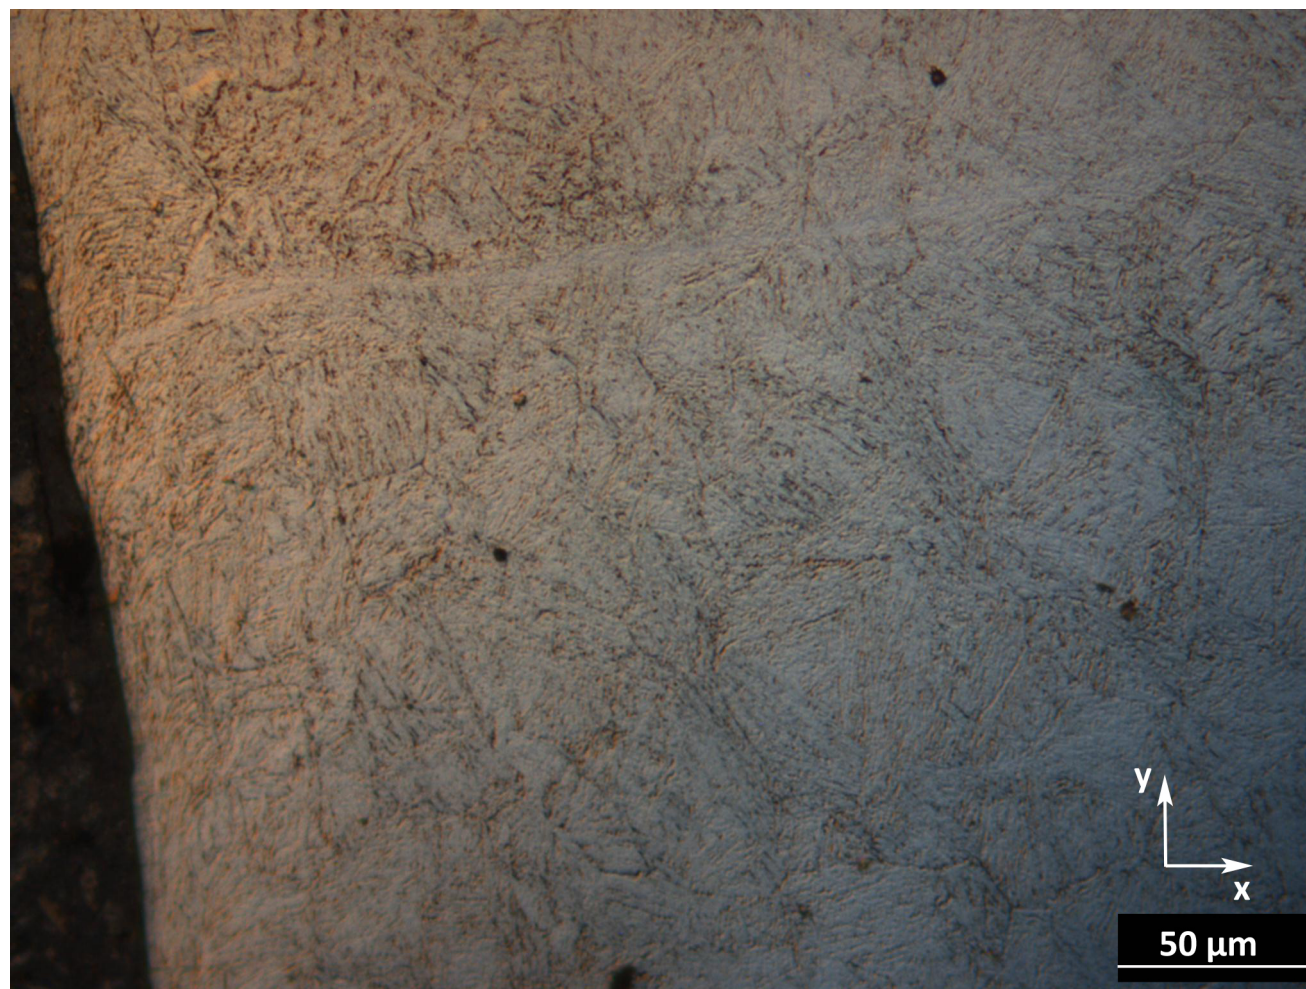

Shear bands close to hole

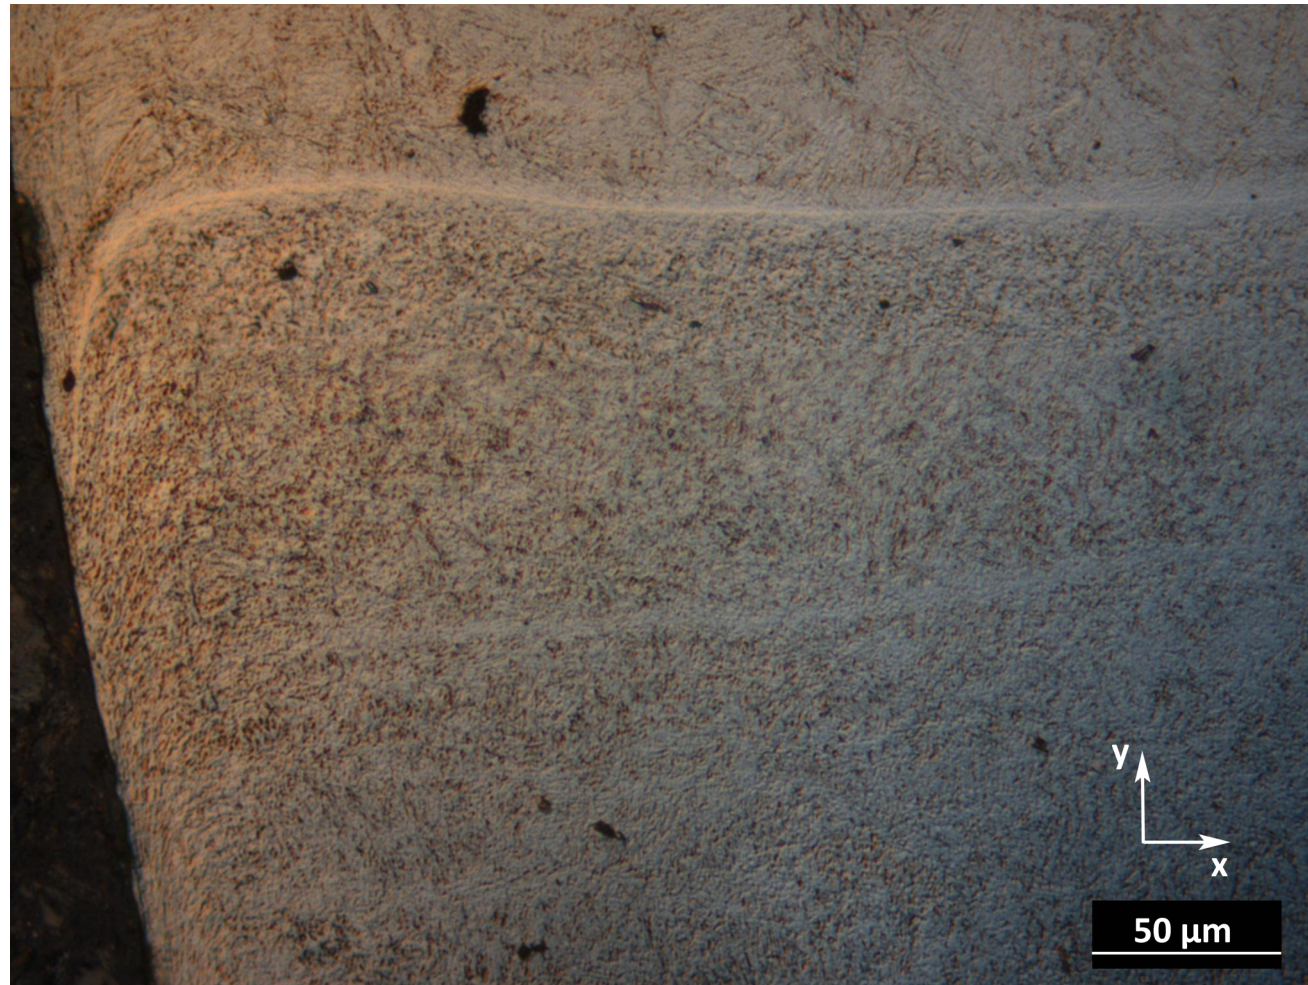

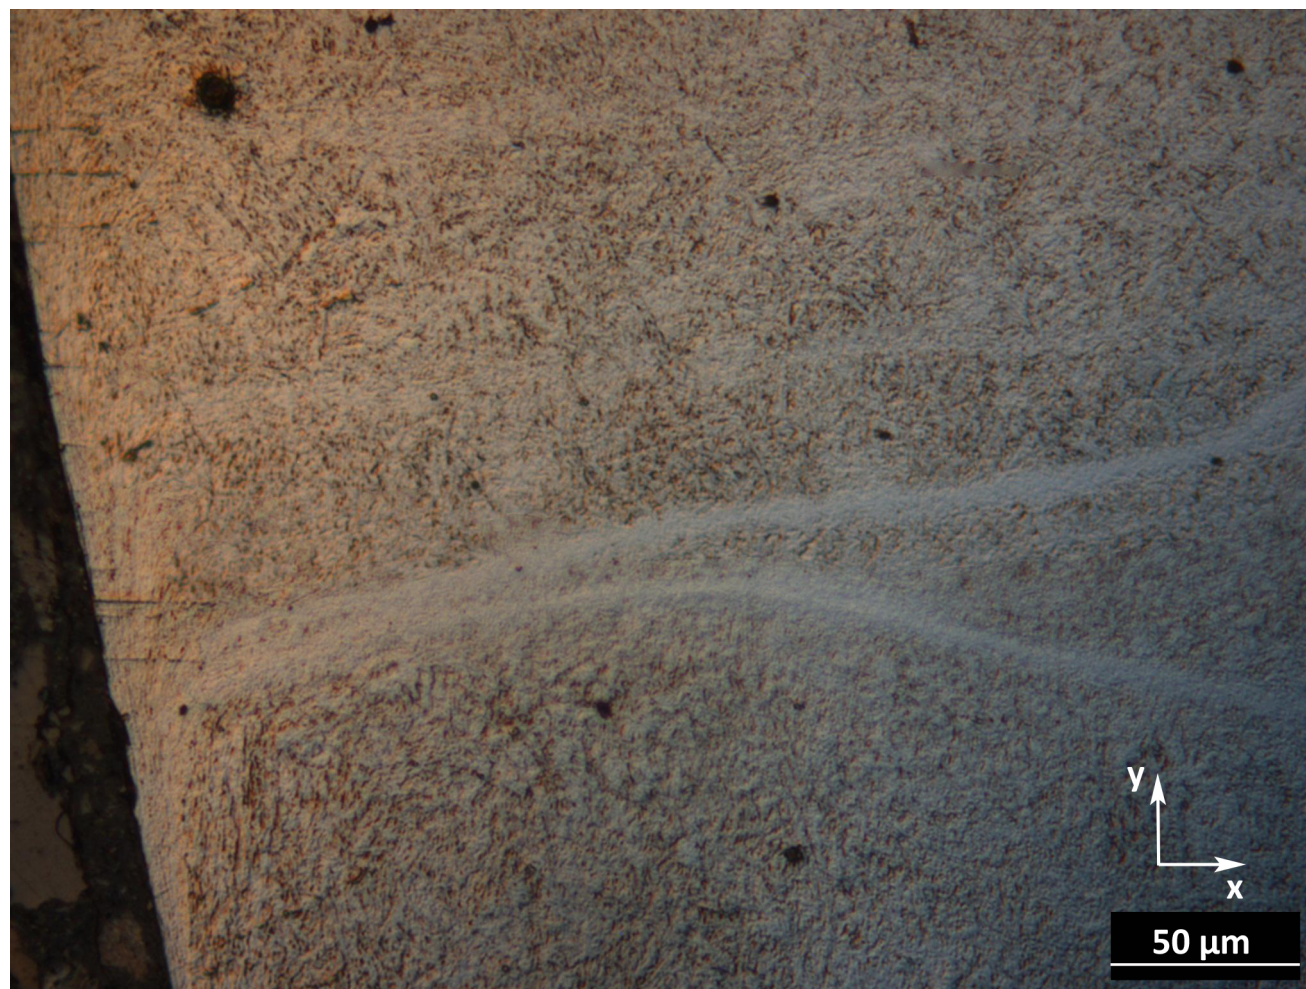

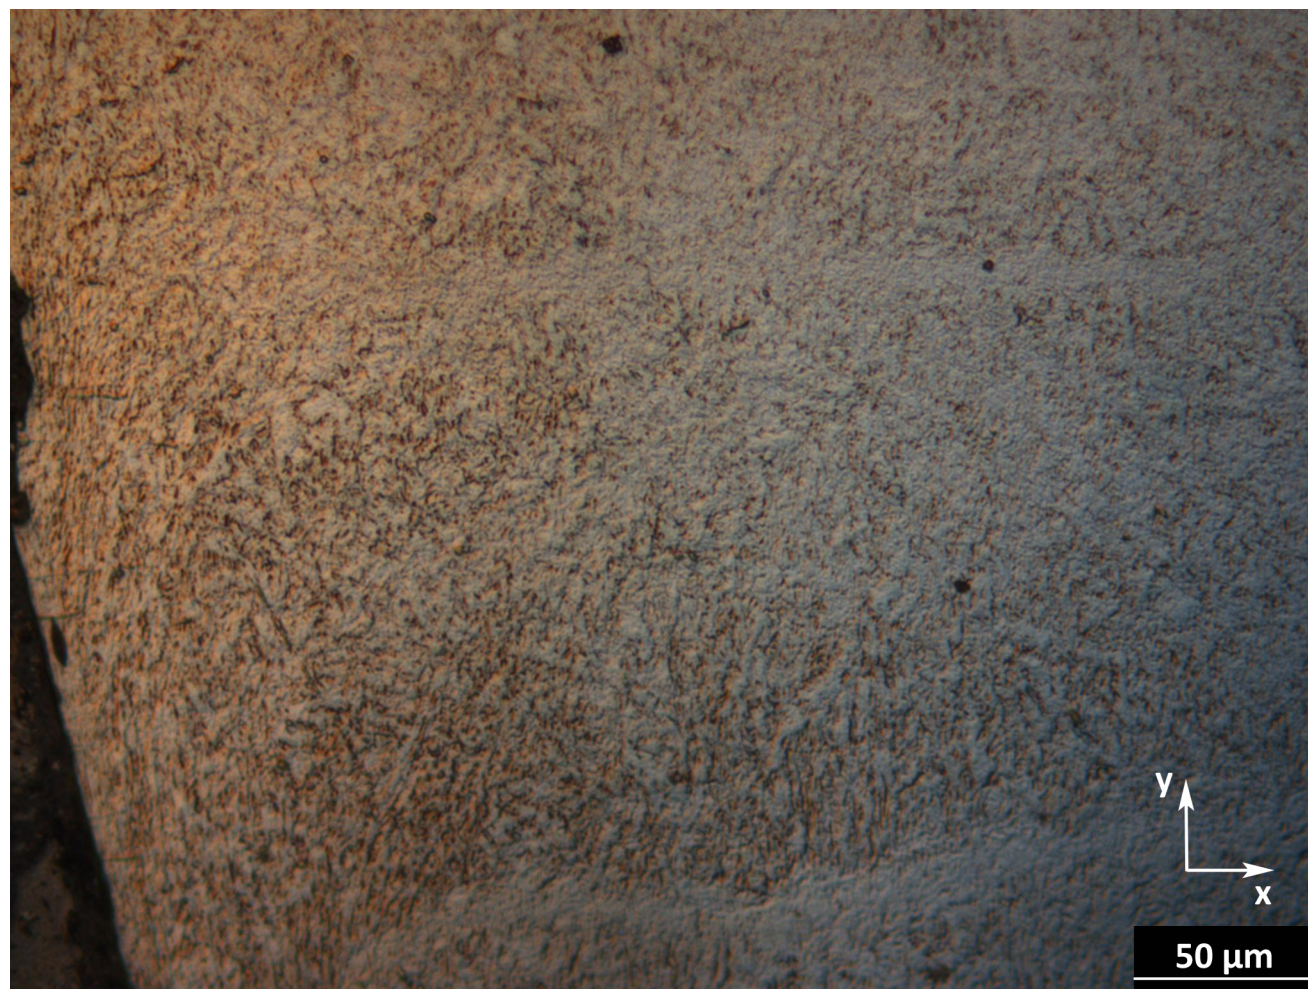

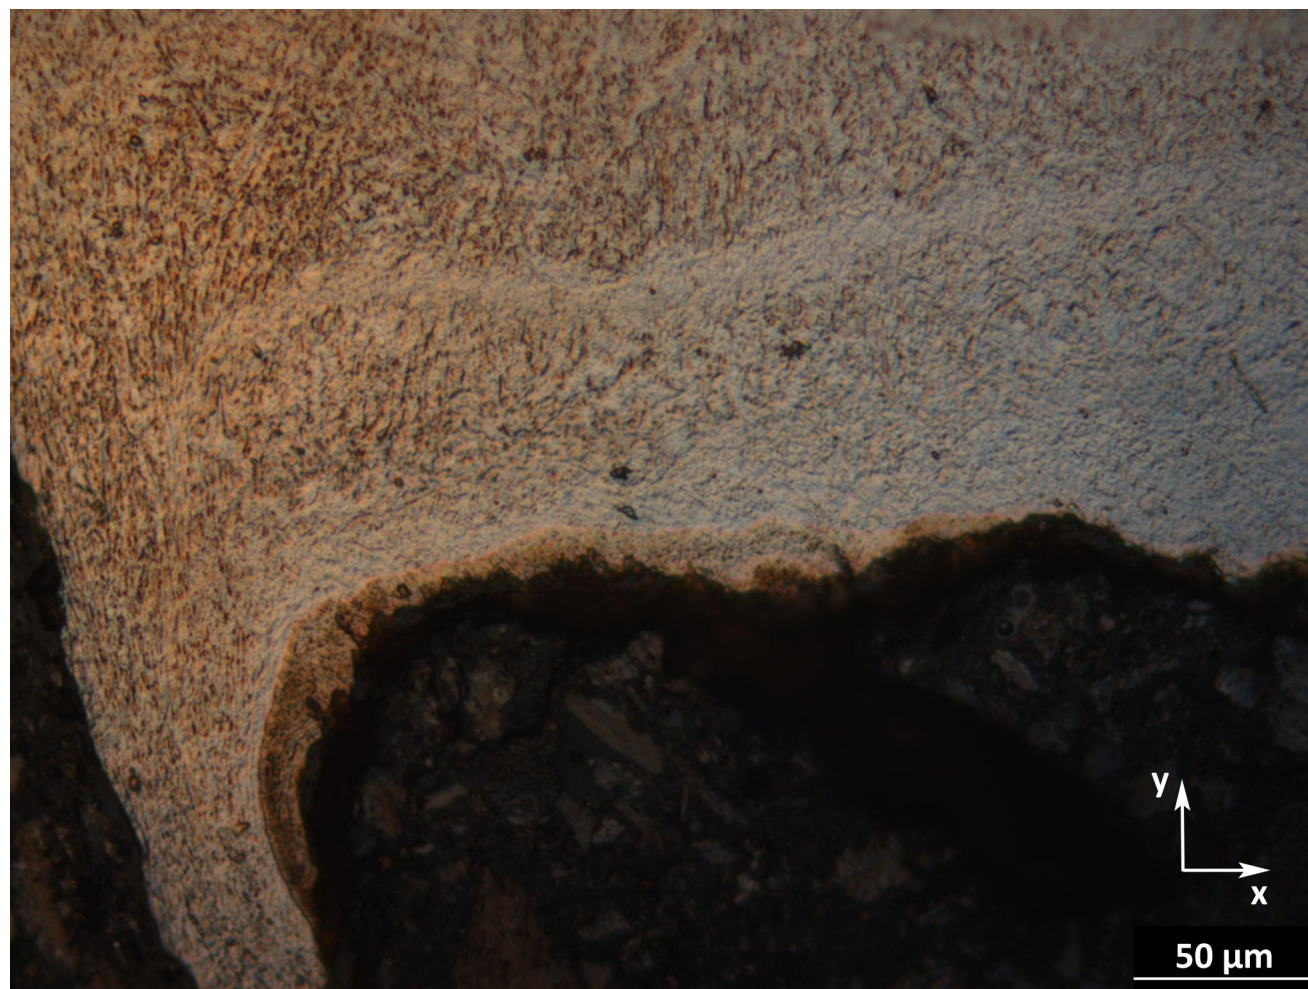

Appears to be microstructural change here compared with the material in the previous 3 images

Location of higher mag. images
